As well as our standard range of PanBlast™ BP Series Pressure Blast Pots, Pan Abrasives also designs and manufactures a wide range of special, purpose built pressure blast pots.

These pots include Bulk Blasters, PMB (plastic media) systems, and dual chamber fully automatic systems, some with either single or multiple outlets. All PanBlast™ Pressure Pots are designed in accordance with the internationally recognised ASME Standard.

The PanBlast™ BB Series Bulk Blasters can be either skid or yard trailer mounted, depending on the customers requirement, and multiple outlets are standard across the range. Either pneumatic or electric remote controls are available, with both systems proving complete independent blasting control for each operator.

PanBlast™ Major type valves are included on the BB system, and compressed air water traps are also standard fitment.

The PMB range of PanBlast™ pots are designed specifically for use with light and or fine abrasives which require a steep angle pot design to ensure proper media flow to the abrasive control valve.

The PanBlast™ PMB pots are also available with diaphragm type dump valves which allow the system to operate at extremely low blast pressures, down as low as 5 psi.

Pan Abrasives also supply the DC range of single or multiple outlet dual chamber blast pots, which allows the system to provide continuous blasting without the need to depressurise to refill with abrasive media.

Contact your local Pan Abrasives representative for further information and details.
