

PanBlast™ LitePro UTN, USN And UBN Blast Nozzles

Surface Preparation Is Our Business

Pan Abrasives range of PanBlast™ LitePro UTN, USN and UBN Blast Nozzles are a general purpose, durable, long venturi type blast nozzle suitable for most open blast and blastroom applications.

All PanBlast™ LitePro blast nozzles feature a tough, shock absorbing polyurethane outer jacket which prevents the nozzle insert from impact damage.

The LitePro nozzles are available with either Tungsten Carbide (UTN), Silicon Carbide (USN), or Boron (UBN) inserts, in sizes from number 4 through to number 8.

This means that there is a PanBlast™

LitePro blast nozzle to suit all applications and abrasive types, with insert characteristics ranging from the low cost, tough tungsten carbide (UTN) through to the lighter weight, more durable boron (UBN).

A simple jacket colour coding system is used for simple nozzle identification, red for UTN, green for USN, and yellow for UBN.

All LitePro nozzle types feature a 50mm contractor type thread for attachment to, and easy removal from, the nozzle holder without the problems of grit entrapment between threads associated with fine threaded nozzles.
