PanBlast™ BHC Couplings are designed for the coupling of blast hoses together, or to couple the blast hose to the blast pot abrasive metering valve.

Manufactured from robust, sand cast, gun metal they are ideal for use in extremely harsh environments where there is the likelihood of damage from other plant or machinery. The snap together design ensures quick, secure joining of mating couplings. Raised internal rings aid in preventing air leakage, and increase hose to coupling gripping force.

NHC Couplings are designed for coupling blast hoses together or attaching the hose to the blast pot. Both lightweight and durable, the couplings are ideal for all compressed air blasting operations.

Manufactured from injection molded nylon, all couplings are identical, ensuring they accurately couple together, every time. An internal raised thread allows ease of fitting to the blast hose and prevents couplings inadvertently slipping off the hose. Pre-installed, spring loaded, safety lock pins automatically interlock with mating couplings.

Ensure hose ends are cut square and hose butts up firmly to coupling shoulder, when installing.

Ensure all correctly sized screws are fitted and check gasket and lock pins daily for wear or damage.
